Dr. Argyros Argyridis is a Rural and Surveying Engineer. He got his master's degree in 2010 from the National Technical University of Athens. He also got his PhD in 2017 from the same institute. His research interests include the investigation and implementation of methodologies for image analysis, machine learning, and knowledge representation to develop automatic mapping approaches from remotely sensed data. He has examined building mapping, building change detection, and landform mapping. He has a significant experience in remote sensing and GIS applications code development, with a variety of languages, libraries, databases, and protocols (e.g. C/C++, Python, PHP, Orfeo Toolbox, OpenCV, Numpy/Scipy, SQL/NoSQL, HTML 5, CSS3, Javascript, AngularJS etc).
